

WHAT IS CLAIMED IS:

1. An integrated computer and display for use in a computer-assisted surgical or interventional procedures, comprising:
 - a case housing a computer for running a computer-assisted surgical navigation process;
 - a panel-shaped display device having a screen on one side;
 - a bracket operable to couple said display device to said case, whereby the display is pivotable between a stowed position in which the screen faces a side of the case and an open position, in which the screen faces away from the case.
2. The computer of claim 1, further comprising a first hinge to hingeably couple a first end of said bracket to said case.
3. The computer of claim 2, further comprising a second hinge to hingeably couple a second end of said bracket distal from said first end to a rear surface, opposite the screen, of said display device.
4. The computer of claim 1, further comprising a keyboard hingeably coupled to said case.
5. A surgery system, comprising:
 - a stand; and
 - an integrated computer couplable to said stand, said integrated computer comprising:
 - a case;
 - a display device coupled to said case; and
 - a bracket operable to couple said display device to said case, said bracket further operable to facilitate pivotal movement of said display device from a fully extended position to a lowered position.
6. The system of claim 4, wherein said stand comprises a base having a front end and a rear end, said rear end of said stand being narrower than said front end.
